

Automatic Cloud Backup for your IT Systems

NeoVault is our proven world-class cloud backup service solution.

Neovault isn't just online file-storage - when you backup your IT systems to Neovault they are effectively replicated on our secure Cloud Servers. Why is this important? Well, if your IT server or computer(s) fail, we can have you back up and running with minimal delay and disruption to your business - your complete system (not just files) is backed up to the Cloud.

How Does It Work?

We install a small software program on the system to be backed up. This is configured to send a copy of your data, via encrypted connection, to our backup servers in a secure data centre facility over your internet connection. You have complete control over which files to backup, and how often.

Is it Secure?

Absolutely. Not only is your data secured when it's being transferred, it is stored in an encrypted state on our backup systems. If you prefer, even Fresh Mango cannot access your data.

Is it Safe?

Certainly. Your data is stored in a fully encrypted state in a RAID storage array (the data is on multiple drives)

How Do I Recover My Data?

You can recover your data via the web console on your own server or in the event of a catastrophic failure, you can contact us and have us recover them for you. Customers backing up entire servers can also request that we convert a backup to a 'ready to go' virtual disk.

Supported Backup Types

Security Details

You may choose from one of three encryption types:

AES 128-bit

AES 256-bit

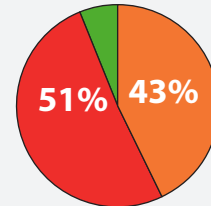

448-bit Blowfish.

Data is encrypted in transit and at rest. Data cannot be recovered without the encryption key. NeoVault also allows a local copy to be generated which is also encrypted, reducing the risk of exposure from hardware theft.

Backup Pricing

GB	BVI	USA
20	\$15	\$10
50	\$30	\$20
100	\$60	\$40
150	\$90	\$60
200	\$120	\$75
250	\$140	\$90
300	\$150	\$100
